

The background of the slide features a stylized city skyline at the bottom, composed of various geometric shapes in shades of blue and white. Above the skyline, the sky is a solid blue color, decorated with several stylized, light blue clouds of different sizes and shapes. The text is centered in the upper half of the image.

DFK30083 CYBERPRENEURSHIP

CHAPTER 1: INTRODUCTION TO CYBERPRENEURSHIP

1.3.1 INTERNET BUSINESS

Let's start with the first set of slides

- Internet businesses are businesses that mainly operate on the internet.
- This type of businesses doesn't need to have production plants, offices, stores...
- Everything from the beginning to the end of the process is performed on the computers and a connection to the internet.

- Advantages of internet businesses for the entrepreneurs:
 - Easy start-up - This type of a business is the easiest way to start your own business. This is one of the biggest advantages of internet businesses. You can start such a business in less than a day. You can also transform your hobby to one very profitable internet business

- There is no need for big financial investment for startup - Other than the cost of a domain name and web hosting, running an internet business is essentially free and depend on your expertise.
- This is only for the startup to make a structure with the technology, but required finances will depend on the type of the business you are starting.

- Having everything in mind, still internet business is cheaper than most other type of businesses.
- You don't must have a product to start an internet business - Starting this type of a business doesn't require products. You can sell products of other internet businesses.

- Automatically globalization of your business - When you do business on the internet, you can do business in any country in the world.
- One of the biggest benefits of an internet business is the global marketplace you will have access to.

1.3.2 TECHNOLOGIES THAT SUPPORT THE INTERNET BUSINESS

Communication and Networking Technologies

- Internet Protocol (IP): The backbone for device communication over networks. Content Delivery Networks (CDN): Tools like Cloudflare and Akamai ensure websites load quickly across the globe.
- Wi-Fi & 5G: Provide fast, stable wireless connections essential for online business.
- Cloud Computing: Enables data storage, computing, and IT services without physical infrastructure.
- Virtual Private Network (VPN): Ensures secure and private communication channels for businesses.

E-Commerce Platforms and Software

- E-Commerce Platforms: Shopify, WooCommerce, and Magento help businesses sell products online.
- Content Management Systems (CMS): WordPress, Joomla, oWix allow the creation of user -friendly websites.
- Payment Gateways: PayPal, Stripe, and Square enable secure transactions.

Cybersecurity Technologies

- SSL/TLS: Encrypts sensitive data during transmission online.
- Firewalls & Antivirus: Protect against cyber threats like hackers and malware.
- Two-Factor Authentication (2FA): Enhances login security .

Analytics and Artificial Intelligence (AI)

- Google Analytics: Provides insights into website traffic and user behavior.
- AI Chatbots: Like ChatGPT, for automated customer support.
- Recommendation Engines: Tailor product suggestions for customers based on preferences.

Digital Marketing Tools

- Social Media Platforms: Facebook, Instagram, TikTok for promotion and customer engagement.
- Email Marketing Tools: Mailchimp or Sendinblue for email campaigns.
- SEO Tools: SEMrush and Ahrefs to improve search engine rankings.

Logistics and Supply Chain Management

- Inventory Management Systems: SAP, Oracle, or Zoho Inventory for stock control.

- Logistics Automation: Uses robotics or AI to speed up order processing.

API and Integration Services

- APIs (Application Programming Interfaces) facilitate seamless integration between various services like payments, shipping, and CRM.

1.3.3 DIFFERENTIATE BETWEEN B2B AND B2C MARKETS

B2B

B2C

BUSINESS TO BUSINESS

- Business-to-business (B2B) is the term used to describe a business relationship between at least two companies.
- This can be small businesses, medium sizes businesses or large corporations.
- An example of B2B would be a chipset manufacturer that sells its products to other companies.

BUSINESS TO CONSUMER

- Business-to-consumer (B2C) is the term used to describe a business relationship between one company and at least one individual consumer.
- An example of B2C would be a travel agency that sells flights to individual consumers.

1. User groups (B2B) vs. individual buyer (B2C)

- In B2B, you tend to market a group of stakeholders in order to make one sale.
- This can include executives, product users, IT staff and managers.
- Think of a committee to decide which AI software subscription to buy.
- In B2C, you tend to market and sell to one individual buyer. Think of a person buying premium app features.

2. Detailed information vs. broad description

- In B2B, you tend to need to create detailed and longer texts for your customers.
- Think of a company that needs to buy a specific fabric.
- In B2C, you tend to create short and broad texts. Think of a person looking for new shoes.

3. Rational vs. emotional

- In B2B, you tend to have a more rational messaging.
- B2B buyers tend to be more planned and logical with a specific return on investment (ROI) in mind. Think of an airline leasing airplanes.
- In B2C, you tend to have a more emotional messaging.
- B2C buyers tend to be more spontaneous and even buy things without actually having a need for it.
- Think of a person buying a new car.

4. Large scale vs. personal use

- In B2B, you tend to market to people that need to buy products or services for a lot of people.
- Think of new laptops for all employees.
- In B2C, you tend to market to people that are buying it for themselves, friends, family, or other people in their household.
- Think of getting a new phone.

5. Longer sales cycle vs. shorter sales cycle

- In B2B, you tend to have longer sales cycles and therefore need to nurture over a longer period of time before a sale is made.
- Think of a multi -million press shop that needs a lot of planning and customization.
- In B2C, you tend to have short sales cycles compared to B2B.
- You may tend to make a sale at the very first touchpoint.
- Think of the purchase of a new printer in a given price range.

6. Educational vs. fun

- In B2B, customers tend to expect more educational content.
- You may use industry jargon or business -friendly terms.
- In B2C, customers tend to expect content that is more fun to enjoy.
- You may avoid the use of any jargon.
- Think of an article about the top 10 tourist destinations in South America.

7. Longer customer relationships vs. shorter customer relationships

- In B2B, you tend to more often have longer customer relationships.
- In B2C, you tend to more often have shorter customer relationships and clients are less loyal.
- Think of a one-time purchase of a backpack made through a retailer.
